Question #1Topic 1

An administrator has successfully created a new Organization for All Apps in VMware Cloud Foundation (VCF) Automation. When logging into the new organization using the first user account, only the Overview tab is visible.

What is a possible cause of this issue?

A. The first user account was assigned the Organization Administrator Role.

B. The first user account was assigned the Organization User Role.

C. The first user account was assigned a Custom Role.

D. The first user account was assigned the Organization Auditor Role.

Correct Answer: B

Question #2Topic 1

An administrator is responsible for a VMware Cloud Foundation (VCF) fleet. The administrator has been tasked with commissioning four ESX hosts for a new workload domain that uses vSAN Express Storage Architecture (ESA) as the primary storage solution.

During the host validation stage in vSphere client, the process fails with the following errors: esx-1.wld.vcf.local. Failed to validate vSAN HCL status. esx-2.wld.vcf.local. Failed to validate vSAN HCL status. esx-3.wld.vcf.local. Failed to validate vSAN HCL status. esx-4.wld.vcf.local. Failed to validate vSAN HCL status.

What is the cause of the errors?

A. The RAID controller in each ESX host is not configured to use RAID-0/Passthrough.

B. The ESX hosts are not using vSAN ESA certified storage devices.

C. The ESX hosts must have internet access to validate vSAN ESA compatibility.

D. The RAID controller in each ESX host needs to be reconfigured to use Tri-mode.

Correct Answer: B

Question #3Topic 1

An administrator creates a tag for a virtual machine (VM) in VMware Cloud Foundation (VCF) Operations. When assigning the tag to the virtual machine in vCenter, the tag was not found.

What is the cause of this error?

A. The tag was not pushed to Custom Groups.

B. The vCenter version is incorrect.

C. The tag was not pushed to the vCenter instance.

D. VM Tools is not installed.

Correct Answer: C

Question #4Topic 1

An administrator is troubleshooting an issue relating to VMware Cloud Foundation (VCF) Automation. While troubleshooting, the administrator realizes that debug-level information is not displayed in the VCF Automation Task Log.

How would the Administrator enable debug-level information in the Task Log?

A. Enable "display debug information" in the Administer > Settings section of the Organization Management portal.

B. Enable "display debug information" in the Administration > General Settings section of the Provider Management portal.

C. Enable "display debug information" in the Administration > Feature Flag section of the Provider Management portal.

D. Enable "display debug information" in the Administration > Events and Tasks section of the Provider Management portal.

Correct Answer: B

Question #5Topic 1

A user wishes to publish a VMware Cloud Foundation (VCF) Operations Orchestrator workflow to their VCF Automation project catalog, but is blocked from publishing any workflows.

The following information has been provided:

In the VCF Automation Organization portal, the user cannot see the Workflows option under Content Hub.

The organization is not a Provider Consumption Organization.

Which are the two likely causes of this issue? (Choose two.)

A. The user is logged in the Project Advanced User rights

B. The user is logged in with Project User rights.

C. The user is logged in with Project Administrator rights.

D. An external VCF Operations Orchestrator is not integrated with their Organization.

E. An embedded VCF Operations Orchestrator is not integrated with their Organization.

Correct Answer: BE

Question #6Topic 1

Through the VMware NSX Manager user interface, the administrator has identified an issue with BGP peering.

Which command on the NSX Edge Transport Node provides more information about the issue?

A. get log-file routing follow

B. get edge-cluster history state

C. get edge-cluster status

D. get logical-routers

Correct Answer: A

Question #7Topic 1

An administrator has been tasked with expanding an existing VMware Cloud Foundation (VCF) workload domain by adding a new cluster.

The VCF fleet has the following configuration:

Three workload domains, including the management domain are configured.

The management domain (WLD-01) and one of the workload domains (WLD-02) are running VCF 9.0.

The other workload domain (WLD-03) is running VCF 5.2.1 and is an isolated workload domain.

When attempting to perform the required steps using the vSphere Client UI the cluster cannot be added to the WLD-02 workload domain.

What step should the administrator perform to complete the workload domain expansion?

A. Use the SDDC Manager API to create the cluster in WLD-03.

B. Use the VCF Operations Fleet Manager UI to create the cluster in WLD-02.

C. Use the SDDC Manager UI to create the cluster in WLD-02.

D. Use the vSphere Client UI to create the cluster in WLD-03.

Correct Answer: C

Question #8Topic 1

The administrator has to change the DRS automation level in preparation to upgrade the vCenter. When making this change through VCF Operations, the following error occurs: 'Internal Error: Failed to retrieve vim client'.

What is the possible cause of this error?

A. DRS Automation is already set on the vSphere Client.

B. Insufficient licensing for the advanced vCenter features.

C. The vCenter is overloaded with API requests from VCF Operations.

D. Connectivity issue between vCenter and VCF Operations.

Correct Answer: D
