Topic 1 - Question Set 1

Question #1*Topic 1*

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com.
You need to identify which server is the PDC emulator for the domain.
Solution: From Active Directory Domains and Trusts, you right-click Active Directory Domains and Trusts in the console tree, and then select Operations
Master.
Does this meet the goal?

- A. Yes
- B. No

Correct Answer: *B*

Question #2*Topic 1*

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com.
You need to identify which server is the PDC emulator for the domain.
Solution: From a command prompt, you run netdom.exe query fsmo.
Does this meet the goal?

- A. Yes
- B. No

A (100%)

Question #3*Topic 1*

You have an on premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant.
You plan to implement self-service password reset (SSPR) in Azure AD.
You need to ensure that users that reset their passwords by using SSPR can use the new password resources in the AD DS domain.
What should you do?

- A. Deploy the Azure AD Password Protection proxy service to the on premises network.
- B. Run the Microsoft Azure Active Directory Connect wizard and select Password writeback.
- C. Grant the Change password permission for the domain to the Azure AD Connect service account.
- D. Grant the impersonate a client after authentication user right to the Azure AD Connect service account.

Correct Answer: *B*

Question #4*Topic 1*

You have an Azure Active Directory Domain Services (Azure AD DS) domain named contoso.com.
You need to provide an administrator with the ability to manage Group Policy Objects (GPOs). The solution must use the principle of least privilege.
To which group should you add the administrator?

- A. AAD DC Administrators
- B. Domain Admins
- C. Schema Admins
- D. Enterprise Admins
- E. Group Policy Creator Owners

https://dbcloud.academy/

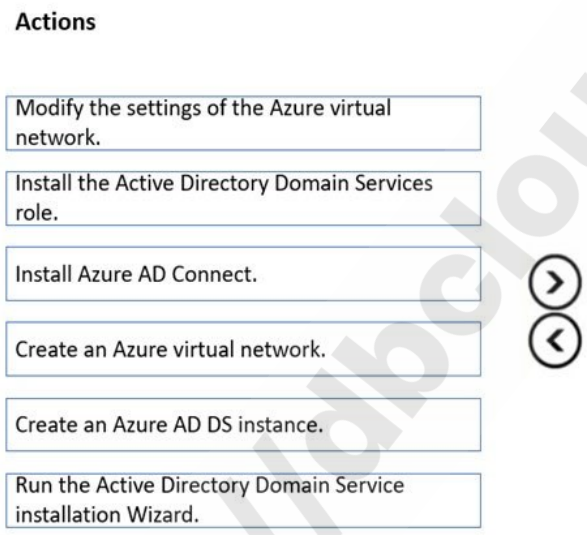

Correct Answer: *B*
Only the Domain Admins group and the Enterprise Admins group can fully manage GPOs.
Members of the Group Policy Creator Owners group can create new
GPOs but they can't link the GPOs to sites, the domain or OUs and they cannot manage existing GPOs.

Question #5*Topic 1*

DRAG DROP -
You create a new Azure subscription.
You plan to deploy Azure Active Directory Domain Services (Azure AD DS) and Azure virtual machines.
You need to ensure that the virtual machines can join to Azure AD DS.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.
Select and Place:

Correct Answer:

Question #6*Topic 1*

HOTSPOT -
You have an Azure Active Directory Domain Services (Azure AD DS) domain.
You create a new user named Admin1.
You need Admin1 to deploy custom Group Policy settings to all the computers in the domain. The solution must use the principle of least privilege.
What should you include in the solution? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point
Hot Area:

Correct Answer:

https://dbcloud.academy/

Answer Area

Add Admin1 to the following group:	
	AAD DC Administrators
	Domain Admins
	Group Policy Creator Owners

Instruct Admin1 to apply the custom Group Policy settings by:	
	Creating a new Group Policy Object (GPO) and linking the GPO to the domain
	Modifying AADDC Computers GPO
	Modifying the default domain GPO

Question #7*Topic 1*

DRAG DROP -
Your network contains a single domain Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains a single Active Directory site.
You plan to deploy a read only domain controller (RODC) to a new datacenter on a server named Server1. A user named User1 is a member of the local
Administrators group on Server1.
You need to recommend a deployment plan that meets the following requirements:

- Ensures that a user named User1 can perform the RODC installation on Server1
- Ensures that you can control the AD DS replication schedule to the Server1
- Ensures that Server1 is in a new site named RemoteSite1

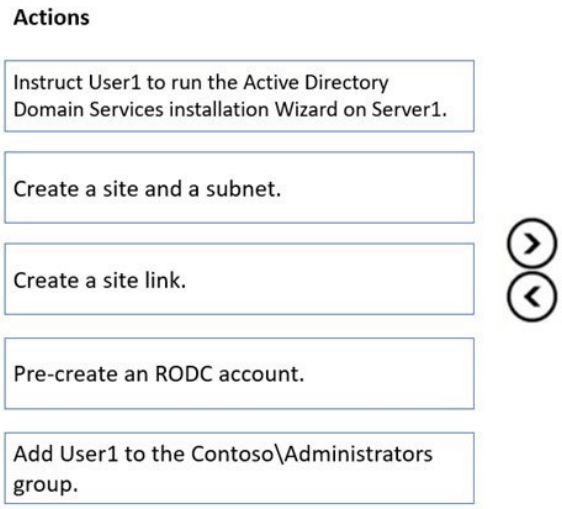

Uses the principle of least privilege

▪

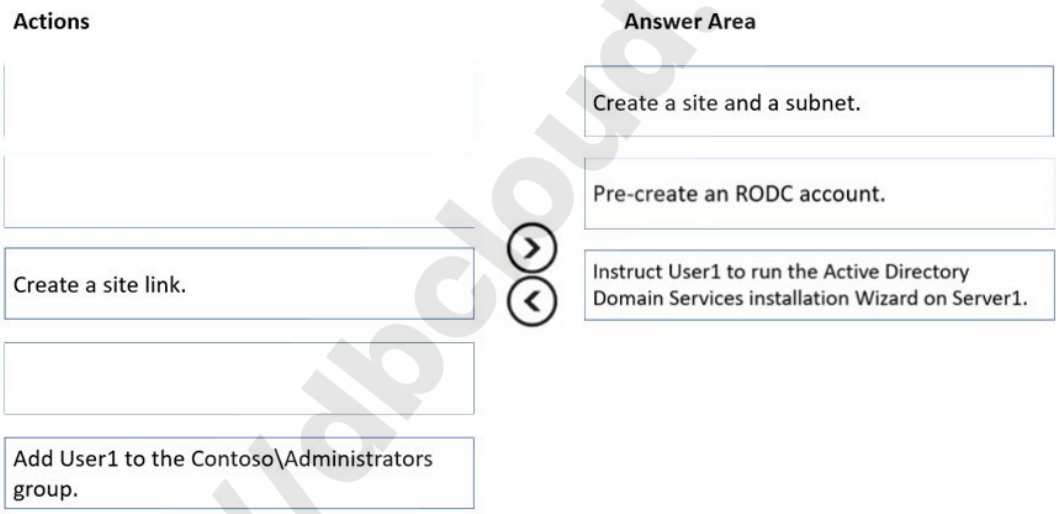

Which three actions should you recommend performing in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

https://dbcloud.academy/

Select and Place:

Correct Answer:

Box 1.
We need to create a site and subnet for the remote site. The new site will be added to the Default IP Site Link so we don't need to create a new site link. You configure the replication schedule on the site link.
Box 2.
When we pre-create an RODC account, we can specify who is allowed to attach the server to the prestaged account. This means that the User1 does not need to be added to the Domain Admins group.
Box3.
User1 can connect the RODC to the prestaged account by running the AD DS installation wizard.
