Question #2*Topic 1*

Which plane on a Palo Alto Networks Firewall provides configuration, logging, and reporting functions on a separate processor?

- A. management
- B. network processing
- C. data
- D. security processing

Correct Answer: *A*

Respuesta por mayor votación de la comunidad

A (100%)

Question #3*Topic 1*

A security administrator has configured App-ID updates to be automatically downloaded and installed. The company is currently using an application identified by
App-ID as SuperApp_base.
On a content update notice, Palo Alto Networks is adding new app signatures labeled SuperApp_chat and SuperApp_download, which will be deployed in 30 days.
Based on the information, how is the SuperApp traffic affected after the 30 days have passed?

- A. All traffic matching the SuperApp_chat, and SuperApp_download is denied because it no longer matches the SuperApp-base application
- B. No impact because the apps were automatically downloaded and installed
- C. No impact because the firewall automatically adds the rules to the App-ID interface
- D. All traffic matching the SuperApp_base, SuperApp_chat, and SuperApp_download is denied until the security administrator approves the applications

Correct Answer: *C*
