Topic 1 - Question Set 1

Question #1*Topic 1*

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have a server named Server1 that runs Windows Server.
You need to ensure that only specific applications can modify the data in protected folders on Server1.
Solution: From Virus & threat protection, you configure Controlled folder access.
Does this meet the goal?

- A. Yes
- B. No

Correct Answer: *A*

Question #4*Topic 1*

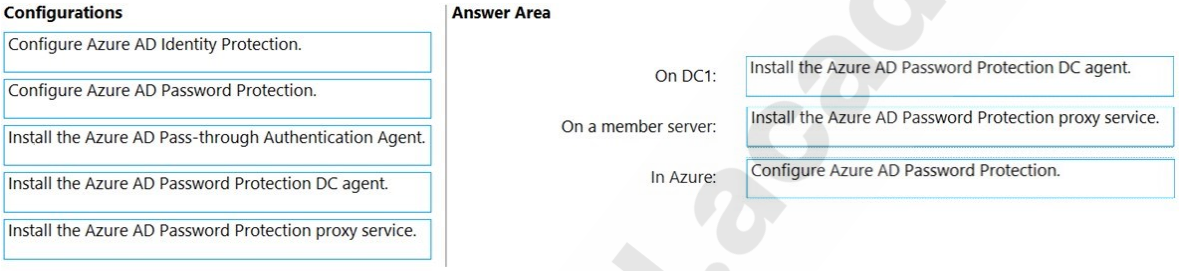

DRAG DROP -
You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant.
The AD DS domain contains a domain controller named DC1. DC1 does NOT have internet access.
You need to configure password security for on-premises users. The solution must meet the following requirements:
☞ Prevent the users from using known weak passwords.
☞ Prevent the users from using the company name in passwords.
What should you do? To answer, drag the appropriate configurations to the correct targets. Each configuration may be used once, more than once, or not at all.
You may need to drag the split bar between panes or scroll to view content.
